### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jonathan Berschadsky on 11/22/2010.

The application has been amended as follows:

**In the claims:**

Claims 12-23 are cancelled.

Claim 9 should read as follows:

A moving image decoding apparatus for decoding encoded moving image data, which is generated by decomposing each frame of moving image data into a plurality of subbands, and encoding a plurality of coefficients for each subband from upper to lower bits for respective bitplanes or sub-bitplanes using the bitplane encoding method in JPEG2000 for a predetermined unit, said apparatus comprising:

hardware means, including at least one processor configured to perform as:

a calculation unit operable to calculate, every decoding a video frame, a time difference  $\Delta T$  between a decoding process time  $DT$  taken in a decoding process of the video frame and a target decoding time  $T$  for the decoding process and adding the calculated time difference  $\Delta T$  to an accumulated time difference  $TT$  to update the accumulated time difference  $TT$ ;

Art Unit: 2482

a non-decoding pass determination unit operable to determine passes that are not to be decoded based on the updated accumulated time difference TT;

a pass decoding unit operable to reclaim the plurality of coefficients of the plurality of subbands from encoded data of passes other than the passes determined by said non-decoding pass determination unit; and

a subband composition unit operable to generate frame data by compositing the coefficients of the plurality of subbands reclaimed by said pass decoding unit,

wherein the non-decoding pass determination unit is further operable to:

manage a table that represents a correspondence between an index Q and a non-decoding pass number NDP(Sb) of a subband Sb,

decide a value of the index Q in accordance with a value of the updated accumulated difference time TT;

select the number NDP(Sb) for each subband Sb uniquely defined by the decided value of the index Q from the table, and

set lower passes for each subband Sb, the number of which is the selected NDP(Sb), as the passes that are not to be decoded.

Claim 10 should read as follows:

A non-transitory computer-readable medium, storing a program, in executable form, for causing an information processing apparatus to perform a moving image decoding method according to claim 1.

Art Unit: 2482

The following is an examiner's statement of reasons for allowance: The present invention as claimed involves a moving picture decoding method and apparatus for decoding encoded moving image data. The novel features include wherein the non-decoding pass determination step includes steps: managing a table that represents a correspondence between an index  $Q$  and a non-decoding pass number  $NDP(S_b)$  of a subband  $S_b$ , deciding a value of the index  $Q$  in accordance with a value of the updated accumulated difference time  $TT$ ; selecting the number  $NDP(S_b)$  for each subband  $S_b$  uniquely defined by the decided value of the index  $Q$  from the table, and setting lower passes for each subband  $S_b$ , the number of which is the selected  $NDP(S_b)$ , as the passes that are not to be decoded.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
